

## Physics 421 - Lecture 19

Fourier Analysis of Real Data!

Doing Experiments!

Waves on a String.

$\sin(\omega t)$

$$\frac{1}{2} \lambda = L$$

$$\boxed{\lambda = 2L}$$

Physics

$\Rightarrow$

$$v = \sqrt{\frac{T}{\mu}}$$

↑  
mass/length

$$v = f \lambda$$

$$= \sqrt{\frac{TL}{m}}$$

$$f = \frac{v}{\lambda}$$

$$=$$

$$\sqrt{\frac{TL}{m}} \div 2L$$

$T$   
Note  $\rightarrow$  specific frequency.

ffmpeg

unig-

low E  $\rightarrow f = 82.407 \text{ Hz}$   
mid E  $\rightarrow f = 164.814 \text{ Hz}$   
high E  $\rightarrow f = 329.628 \text{ Hz}$

Octaves

$$f = \frac{v}{\lambda} = \frac{1}{2}$$

(mp 4)

$$f_{\text{sample}} \Rightarrow 44.1 \text{ kHz}$$

$$f_{\text{nyquist}} \Rightarrow 22 \text{ kHz}$$

↑

Hums  $20 \text{ kHz} \rightarrow 20 \text{ kHz}$

↑

Musicians

$\rightarrow$  [Beat Young]
